

All-Porcelain Crowns

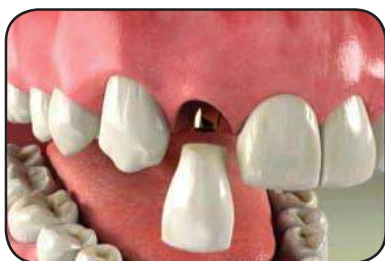

Before crowns

Restore a chipped tooth

Translucent crown

Crown covers an implant

After all-porcelain crowns

Natural looking

To restore a damaged smile, all-porcelain crowns can be a beautiful choice.

All-porcelain crowns have the translucency and color of your natural teeth. This makes them an excellent choice when esthetics are of great importance.

Benefits of crowns

Crowns can—

- ❖ restore teeth that are chipped.
- ❖ protect weak teeth.
- ❖ cover a large filling.
- ❖ cover a dental implant.
- ❖ cover teeth that are severely misshapen or discolored.

Metal unnatural looking

Some crowns are lined with metal, called a porcelain-fused-to-metal crown. This can create a dark line at the gum, making the teeth look unnatural.

All-porcelain crowns do not contain a metal lining, so you will have a natural-looking smile for years to come.

If an all-porcelain crown is right for you, we will work with you to get the perfect fit for a beautiful smile.
